

Sr. Manager Scientific Clinical & Medical Innovation

Description: To become a key member of our client's External Innovation Team that will be responsible for the clinical and medical assessment of external opportunities in those therapeutic areas consistent with the corporate strategy.

Additionally, the Sr. Manager will have a critical role in ensuring that the company is considered a partner of choice for external innovation, working alongside peers in other companies and academic institutions.

This position can be located in either Barcelona or Dublin.

Main responsibilities:

- Lead clinical assessment of external innovative opportunities analysing both the medical need as well as the clinical roadmap to achieve regulatory approval.
- Work closely with cross-functional teams (BD, R&D, Med Affairs, IP, Clinical, Industrial) for the continued evaluation of external opportunities
- Cultivate and expand existing networks in the US/Europe - biotech, pharma, venture, research institutes and academic communities - to ensure high quality deal flow for the company
- Drive awareness of the company and position it as a partner of choice
- Collaborate with corporate leadership to help refine / refresh the company's strategy as appropriate and drive development of external innovation strategy

Requirements and skills:

- MD, preferred Clinical pharmacologist specialist
- Exceptional scientific credentials and external profile
- Minimum 5 years' experience in biotechnology/pharmaceutical industry (or in related life sciences fields including venture capital and/or technology transfer) supporting the medical and clinical evaluation of external innovation
- Experience in designing clinical trials in several therapeutic areas.
- Knowledge of Drug Discovery, Development and Intellectual Property Processes
- Strong analytical skills and the ability to communicate complex information and analyses
